RE: Water Quality Investigation

Tybouts Landfill

Dear Professor Chesson:

Confirming our earlier conversation we have no objections to the use of the leftover funds of this contract for educational purposes in the field of environmental protection and control. However, we would have one request; as you probably are aware, we developed a very unpleasant condition at the Tybouts Landfill. Some leaching from the landfill got into the fresh water ponds, severely discolored same and developed a very abnoxious odor. Dr. Varrin of your department is very familiar with this situation.

We would like you to spend some of the leftover funds to further investigate this problem and give us a solution in case the situation would arise again. I will be on vacation for the next two weeks, but I would like to discuss the situation with you upon my return, probably the first week in September, at which time I will be in touch with you.

Thank you for your wonderful cooperation in this entire program.

Yours very truly,

Uldis Karins, P. E.
County Engineer
